PROJECTS

ANN vs CNN – Image Classification Analysis | [GitHub](#) Aug 2026

- Developed a machine learning project comparing the performance of **Artificial Neural Networks (ANN)** and **Convolutional Neural Networks (CNN)** on classification tasks.
- Implemented, trained, and evaluated both models using standard deep learning techniques to analyse their accuracy, efficiency, and performance.
- Visualized and compared evaluation metrics to identify the strengths and limitations of each architecture for different types of data.

Tech Used: Python, TensorFlow, Matplotlib, NumPy

GradeMatrix – Academic Performance Tracker | [GitHub](#) Jun 2026

- Developed **GradeMatrix**, a full-stack student result management system for automated grade, GPA/CGPA calculation, and academic performance tracking.
- Implemented secure role-based authentication and comprehensive CRUD operations to efficiently manage students, courses, and examination records.
- Built a responsive and scalable web application using modern technologies, streamlining result management and reducing manual administrative effort.

Tech Used: React.js, Node.js, MongoDB

TRAINING

AI/ML – Basics of Machine Learning and AI use Jun 2026 – Sep 2026

- Completed structured training covering fundamental concepts of **Artificial Intelligence and Machine Learning**.
- Gained practical exposure through **guided tasks, projects, and hands-on learning activities** and applied concepts using relevant AI/ML tools and techniques.

Tech Used: Python, Machine Learning, Artificial Intelligence
